

GRM FRP Custom Fabrication

DESIGN DATA

GRM Custom Products is in the problem-solving business. Bringing it all together is where GRM's vast knowledge and experience shines. Many of our clients come to us with a simple problem. "I need my employees to safely go to the top of the vessel and take a reading, every day." Or "All of the wood beams in the visitor center of our aquarium have rotted away because of constant moisture."

We listen to our customer's challenges and design solutions that meet and exceed those needs. We source the best fiberglass-reinforced plastics from leading manufacturers to those specifications. We measure, cut fabricate, build, and assemble the project using open molding techniques.

From inception to installation, let GRM Custom Products make the difference in solving your next challenge. If you can draw it, sketch it, design it, or dream it, GRM Custom Products can build it.
